

BRANDING IRON TYPES

The illustration below will show how a brand will look when using the different types of branding irons. Please note the horns on the Freeze and Brass Fire brands can have a pointed or tapered horn but on the electric and Stainless Fire brands they are a consistent line thickness. Also, the gaps in the lines of the Electric, Brass and Stainless Fire are required to reduce the heat buildup in the connecting points whereas with Freeze brands that is not an issue.

Electric

Freeze

Brass-Fire Heated

Stainless- Fire Heated
